Acknowledgements

To Dr. Nguyen Dang Vang, director of the National Institute of Animal Husbandry (NIAH) for his invitation to give this course and for all the facilities he made so kindly available

To the CIRAD International Research Training Network for providing the funds necessary for this training course to take place.

To Dr. Jean-Charles Maillard (CIRAD-PRISE), for his help in organising the training course and to Ir. Marc Bolard (CIRAD-PRISE), for his assistance in the definition of the content of the course and the preparation of material for lectures and practicals, and for his translation job from French to English.

To Madam Bui Phuong Thuan for her translation job for their translation job from French to Vietnamese and Madam Ta Bich Duyen for English to Vietnamese translation.

To Xavier Rognon (INA Paris-Grignon), Jean-Pierre Bidanel and Gérard Coquerel (INRA, Jouy-en-Josas) and Sophie Matallia (Institut de l'Elevage, Jouy-en-Josas), for having provided some useful information and material.

To all people having attended the course, for the stimulating discussions and exchanges during the week.

Etienne Verrier, March 2005

| 06/12 | **Lecture 1** - General introduction. Context, purpose and tools of animal breeding  
**Case study 1** - Domestication, genetic resources, selection: the example of chicken  
**Case study 2** - Evolution of the local cattle breed Aubrac and of livestock production in a mountainous region in France | E. Verrier |
| 07/12 | **Lecture 2** - What is known about the genetics of quantitative traits, how they are modeled  
**Case study 3** - Computing heterosis parameters in the case of both direct and maternal effects | Nguyen V.D. |
| 08/12 | **Lecture 2** (continuing) - The relationship between parents and offspring, the estimation of heritability  
**Lecture 3** - The genetic evaluation, the Estimated Breeding Values (EBVs) and their accuracy  
**Documents analysis** - How EBVs are published | E. Verrier |
| 09/12 | **Lecture 4** - The creation of the genetic gain. The parameters of the annual genetic gain  
**Lecture 4** (continuing) - The diffusion of the genetic gain, examples of selection programmes |          |
| 10/12 | **Lecture 5** - The potential effects of crossbreeding and the main kinds of crossbreeding plans  
General conclusion |          |
